

## Using Badges in Moodle – for students

### What are Badges in Moodle?

Badges are a new feature of Moodle that are used to recognise your achievements in your course.

When you complete certain activities or demonstrate a level of skill or knowledge in a particular task, you will be awarded a badge – either by your teacher or automatically by the system.

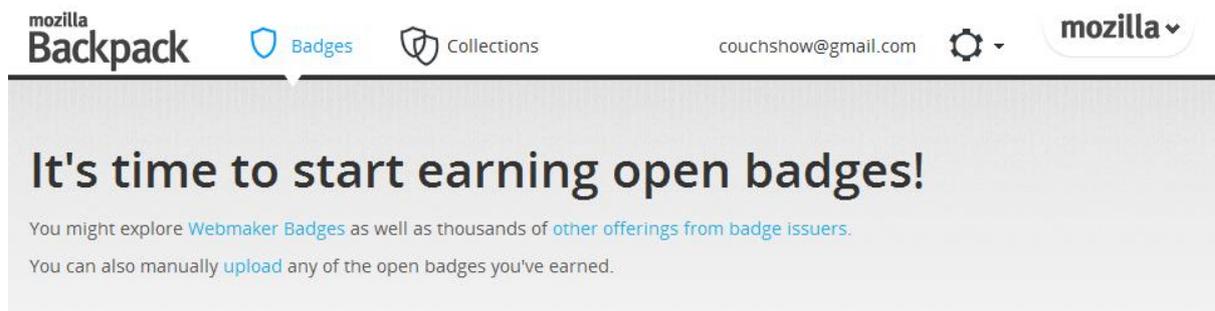

Badges are recognised anywhere on the Internet because they contain information about your achievements and the organisation that issued the badge. In addition to being displayed in Moodle, they can be stored online in a virtual “backpack” and attached to a range of other websites including LinkedIn, Twitter, WordPress blogs, Facebook and more.

Please note that this guide has been created for eLearn, CIT’s Moodle 2.6 system and your Moodle system may look different to some of the screenshots.

### How to set up an OpenBadges Backpack.

1. Go to <http://backpack.openbadges.org> and click “Log in or Sign Up”
2. Enter your email address to create a Mozilla Persona account. (This is free)
3. Create a password to use with Persona. (If you choose a Gmail account, you will have the option to just log in with your Google account instead)
4. You now have an OpenBadges Backpack that you can use to store your badges.

The screenshot shows the Mozilla Backpack website. At the top, there is a navigation bar with the Mozilla Backpack logo, a 'Badges' link with a shield icon, a 'Collections' link with a shield icon, the user email 'couchshow@gmail.com', a settings gear icon, and the Mozilla logo. Below the navigation bar, a large grey box contains the text: 'It's time to start earning open badges!' followed by two lines of smaller text: 'You might explore [Webmaker Badges](#) as well as thousands of [other offerings from badge issuers](#).' and 'You can also manually [upload](#) any of the open badges you've earned.'

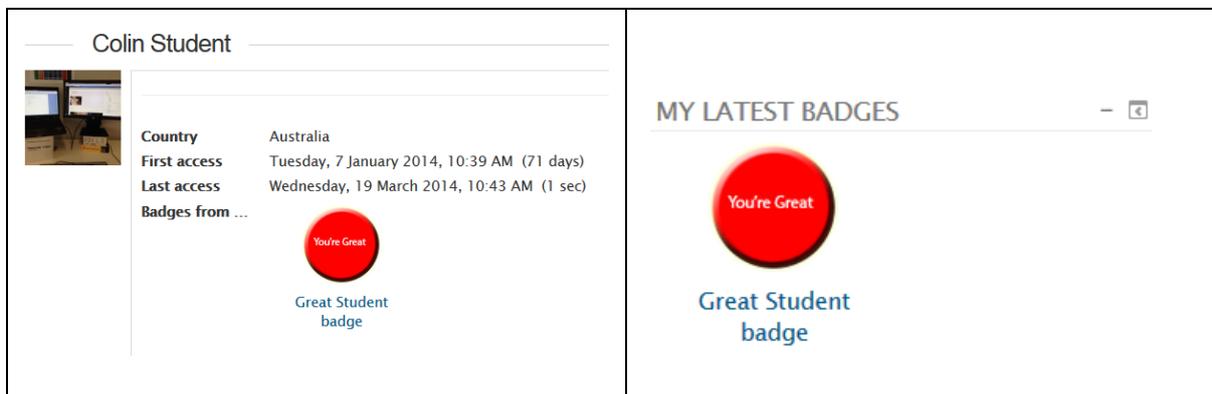

## Connecting your OpenBadges Backpack to Moodle

1. Log in to Moodle
2. Access your profile by clicking your name
  
3. Click Badges and then Backpack settings in the Administration section of the page.
  
4. Click Sign in with your Email to connect your Moodle profile with your OpenBadges Backpack.
5. You will need to use the login information that you used to create your OpenBadges Backpack.
  
6. Your Backpack should now be connected to your Moodle profile. Any badges that you earn in Moodle courses can now be added to your Backpack and shared online.

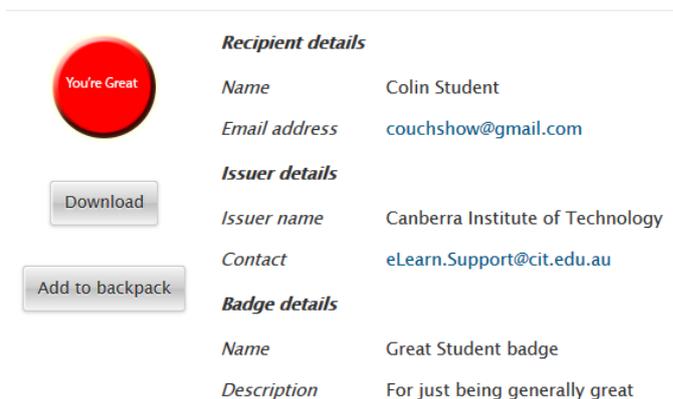

The screenshot shows the Moodle user profile administration interface. At the top, there is a blue header with 'eLearn HELP' and an information icon, and a message 'You are logged in as Colin Student (Log out)'. Below this is the 'ADMINISTRATION' section. Under 'My profile settings', there are links for 'Edit profile', 'Security keys', 'Messaging', 'Blogs', 'Badges', 'Preferences', and 'Backpack settings'. The 'Backpack connection' section is expanded, showing the URL 'http://backpack.openbadges.org' and a status of 'Not connected'. A 'Sign in with your Email' button is visible. Below this, the 'Backpack connection' section is shown again, but now with a status of 'Connected' and an email address 'couchshow@gmail.com'. A 'Disconnect' button is present at the bottom right of this section.

## What to do with your badges

When you earn a badge, it will appear both in your profile in Moodle and also in the “My Latest Badges” section of the Moodle course that you earned the badge in.

Click the badge in either of these sections to find out more about the badge and to add it to your OpenBadges Backpack.

Click the “Add to backpack” button to add your badge to your Backpack. (You will need to log in) Backpack will ask you if you want it to accept your badge – just click Yes and you’re done.

(Find out more about using OpenBadges at <http://openbadges.org/about/> )
